GTS
Elevate Your Innovate

Corporate Overview

PLM at work for you

We specialize in optimizing our PLM technology and your PLM processes with measurable returns and improved processes. That is our focus.

By uniting business consulting, application development and systems integration, GTS provides a complete and expert approach to help companies' link people-to-people and people-to-processes.

Lifecycle Process Management

- Collaborative product development
- Prototyping through to production ramp up
- Line building, margin analysis and adoption
- RFQ's, negotiations and approvals
- Cost breakdowns and analysis
- Line calendaring
- Pre-production event planning & tracking
- Sourcing, inspection results and outbound logistics

Lifecycle Data Management

- Materials
- Style masters and SKUs
- BOM/Specifications
- Revisions, history and audit trails
- Product quotes, margins and approvals.

IMPLEMENTATIIONS THAT WORK

1. Find your executive evangelist
2. Look for your pain points in development
3. Set goals for your PLM strategy
4. Establish metrics
5. Find an IT solution to support your PLM initiative without overwhelming your organization

APPLICATIONS THAT FIT

One Version of the Truth

One database ensures accurate information.

Lower Overhead, Better Results

Increases in efficiencies and productivity as well as eliminating redundant work and keeping Department headcount from rising are common benefits we hear from customer using our solutions.

Reduced Learning Curve

Intuitive screens make user training and orientation easy.
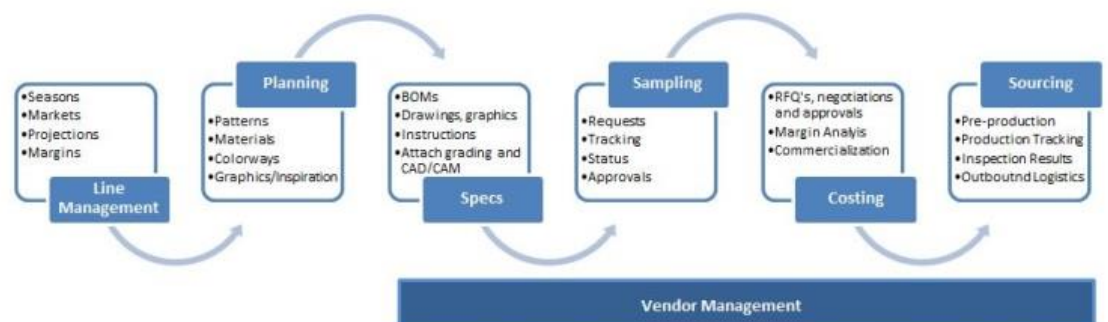

Accurate Specs, Lower Sample Iterations

No more incorrect samples and wasted time due to incomplete or poorly organized specs.

Industry Tailored Applications

Built-in best practices from years of experience ensure implementations are smoother and faster.

Accelerate Market Driven ROI

Our PLM solutions improve ROI by delivering more quickly, cheaply, and by meeting and often beating expected delivery dates of samples, prices and production product.

Key Features of Our PLM Solutions

Our PLM solutions have an intuitive workspace for designers, product developers and merchandisers to create/update:

Lines: Create Line Folders to organize your work any way you want; for example by season and year, collection, season and year or customer, season and year.

Plan (Product Brief): Capture marketing and/or design brief details such as target volumes, FOB, margin, sizes, dimensions, launch date, colors, etc., as well as inspiration visuals including photos and sketches.

Style: At the heart of our PLM applications is a Style dashboard where you can create select and access all of the information associated with a specific style. The dashboard contains access to and ability to capture critical details on the style including:

Graphics: Support your Design Spec with callouts, line drawings, sketches, photos of print samples, logo details, pattern details and other critical images.

Components: Construction components at the design-level in the Plan and detailed components in the Spec - with comments and drawings. ·

Bill of Materials: Manages the process and data requirements from design spec to BOMs.

Materials Management: Capture materials, their properties, testing results and approvals.

Quote Management: Generate RFQ's, capture quotes and approve.

Finance: Project and manage costs and margins. Filter by line, customer or a host of other criteria.

Blogs: Style-level thread lets you create and communicate at the style-level, with attachments rather than in disjointed and combined e-mails.

Calendar and Events: Calendar can be updated by users anytime with review meetings, etc. and when milestone events are updated at the Style-level.

Business Intelligence: On-line query for planning, margin and line status. Export to Excel for external use.
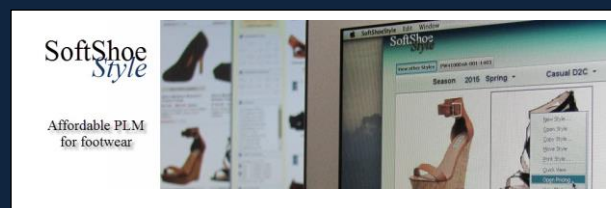

FOOTWEAR

SoftShoe
Enterprise application with deep, rich functionality across a number of modules.

SoftShoe*Style*
Developed for small to medium size companies with limited resources or any company wishing to take an incremental approach to PLM.

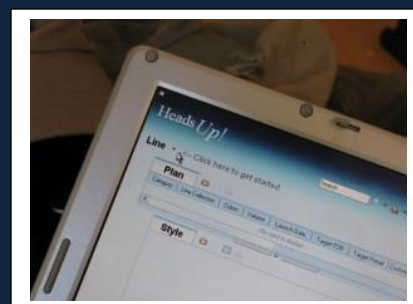

ACCESSORIES

Heads Up!
PLM for the accessories industry. Whether it's hats or handbags, this solution will streamline your development operations both here and abroad.

APPAREL

Texelerate
While there are a number of PLM solutions on the market for the apparel industry, there is no affordable apparel solution that can share common files with other industry/product specific solutions. Texelerate is an excellent choice for multi-category product companies.

GTS is part software designer and developer, part business consultancy and part systems integrator. Together, we take a holistic approach to creating PLM solutions for exceptional brands and companies.

GTS is 100% focused on delivering PLM solutions and utilizing state of the art technology to support it. We don't develop CRM, ERP or CAD/CAM solutions. We don't deliver solutions across a disparate range of industries. We are a consumer goods solution provider. Using our applications, customers are collaborating globally on design specifications, materials, samples, vendor quotes, pricing and margins, production status and material compliance.

Since 1996, we've been helping customers achieve PLM excellence by taking an individual, client-first approach to each and every project we take on. No two companies are the same; no two industries are the same.

We are dedicated to servicing our users and believe in the importance of inspiration and innovation (yours and ours) and the continued pursuit to simplify PLM through technology.

Ren: The Chinese symbol for people. It is a two stroke character that with one, the other will fall.

It characterizes our business and mission to support our clients by delivering PLM solutions tailored to their needs and industry.

You succeed; we succeed!
